

LIGHT SENSOR

Product code: 105-00018

Mostly used in farm buildings, it is also suitable for industrial installations.

The Light Sensor has two 0-10V analog outputs with a very low output resistance and full protection against short circuits and wiring failures.

The sensor is controlled by a microprocessor and has a bi-colour light emitting diode (LED) to indicate operating status and error diagnostics.

- Precise
- 0-100 lux or 0-1000 lux range

- It is very important that the lights work in due time.
- Designed to measure light intensity accurately.

- Easy to set up
- 1 year warranty
