

CO2 SENSOR

Product code: 105-00009

Air quality is an important parameter to ensure optimal production conditions in farm buildings.

The amount of CO2 in the air is normally used as an indicator of air quality.

Most manuals and textbooks recommend a maximum level of about **3000-3500 ppm**.

- Carbon dioxide is a key indicator of the indoor air quality.
- You can now manage the supplied amount of fresh outdoor air with the Zaxe CO2 Sensor.
- Advanced temperature controllers can control minimum ventilation based on current CO2 level measurements.

- Measuring principle by non-dispersive infrared technology (NDIT)
- High precision
- Ensures optimal production conditions
- Easy to set up
- 1 year warranty
